

SonicWALL CDP Secure

BACKUP AND RECOVERY

All-in-one Continuous Data Protection and Endpoint Security

Data is constantly at risk from threats such as spam, viruses, theft and natural disasters. It is important to have a business continuity solution that addresses concerns beyond local backup and recovery. Data loss or corruption can cost days of productivity, threaten client relationships and even expose an organization to legal liability. In an emergency, rapid and secure recovery of critical business systems and data is imperative.

To raise data protection to the next level, SonicWALL® CDP Secure (CDPS) seamlessly integrates four SonicWALL services to ensure end-to-end data protection. CDPS eliminates the cost and complexity associated with purchasing separate point products and add-on services, integrates comprehensive continuous data protection into one easy-to-purchase package, and provides greater value. The CDPS bundle includes a 1-year subscription for each of the following services for a SonicWALL CDP Series appliance:

- SonicWALL CDP Offsite Data Backup Service
- SonicWALL Client/Server Anti-Virus Suite
- SonicWALL Anti-Spam Desktop
- SonicWALL Dynamic 24x7 Support

Features and Benefits

Disaster recovery and business continuity are ensured by the SonicWALL Offsite Data Backup Service, which automatically sends critical data marked for offsite protection from the local CDP appliance to a secure data center. All data is transmitted and stored with AES 256-bit encryption. Administrators can easily recover the data through a simple point-and-click interface in the event that the CDP unit at the local site is not viable.

Comprehensive virus, spyware and desktop firewall protection for desktops and laptops is provided by the SonicWALL Enforced Client Anti-Virus and Anti-Spyware solution, ensuring that the data you backup and recover will not damage your system.

Real-time spam protection from SonicWALL Anti-Spam Desktop minimizes the impact of backing up Outlook .PST files by applying the unparalleled accuracy of the SonicWALL GRID network to eliminate spam and phishing attacks from the inbox.

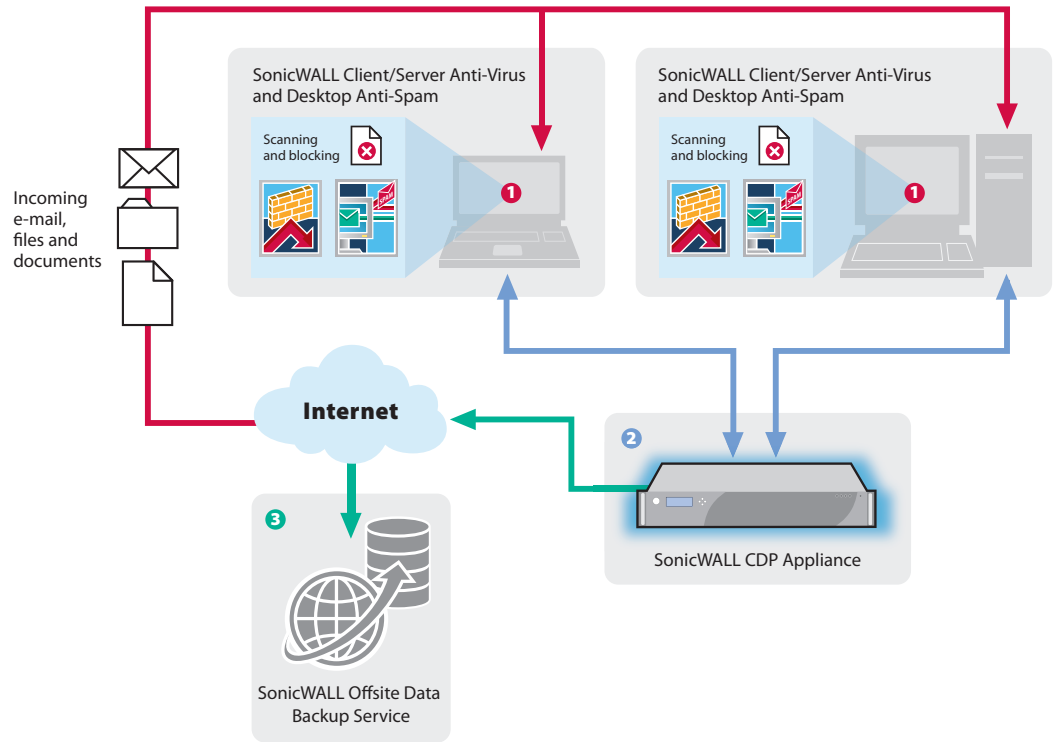

SonicWALL Dynamic Support 24x7 delivers comprehensive, anytime telephone and online support for your solution; automatic updates for all software and firmware; replacement of defective hardware; and online access to SonicWALL's support tools.

- Disaster recovery and business continuity
- Comprehensive virus, spyware and desktop firewall protection
- Real-time spam protection
- SonicWALL Dynamic Support 24x7

Specifications

Features	CDPS 1440i	CDPS 2440i	CDPS 3440i	CDPS 4440i
