

SonicWALL Spike License Packs

SECURE REMOTE ACCESS

Flexible Disaster Recovery and Business Continuity

Many businesses have learned they need to proactively prepare their networks for potential business disruptions. But proper planning for disaster recovery is not limited just to catastrophic events such as hurricanes and pandemics. A power outage, a flu outbreak, a transit strike or even a winter storm can also disrupt business, unless mission-critical members of the workforce can carry on remotely. In addition to all these scenarios, even anticipated seasonal business cycles can create sharp spikes in demand for secure remote access to important resources.

SonicWALL® offers the definitive disaster recovery (DR) solution to instantly increase capacity for secure remote access. The SonicWALL Spike License Packs for the E-Class Secure Remote Access (SRA) Series and SRA Series are add-on licenses that enable distributed businesses to increase remote user count immediately, enabling seamless business continuity. Spike License Packs work like an insurance policy toward any future planned or unplanned spikes from current user counts to tens or even hundreds of additional users.

The Spike License Packs are available for sudden increases of up to 50 users on the SRA 1200, 500 users on the SRA 4200, 250 users on the SonicWALL Aventail® E-Class SRA EX6000, and up to the appliance maximum 5,000-user count on the E-Class SRA EX7000.

Features and Benefits

Instant secure remote access when it is needed most, a complete DR solution must be able to handle a significant spike in remote access traffic, while still maintaining security and cost controls. DR implementation is not complete without a secure remote access solution like the SonicWALL SRA—because during a business disruption, all local network users may suddenly be limited to working from home or another remote location.

Insuring against business disruptions or seasonal spikes, the SonicWALL Spike License Packs for the E-Class SRA and SRA Series are ideal as part of a company's overall DR plan or for companies that experience seasonal or market-driven spikes, such as accounting firms during tax season or retailers during the holidays.

Designed for reliability in emergencies, SonicWALL SRA appliances play an intrinsic role in overall DR planning for many businesses in the real world, providing a secure application access gateway, ensuring a model of redundancy, and serving as a gateway to hot, warm or cold DR facilities. For added reliability, E-Class SRAs also offer high availability (HA) with integrated load balancing and active/active stateful failover on the SRA EX7000 and EX6000, eliminating the added cost of a third-party load balancer. The SonicWALL SRA 4200 offers HA in the form of an active/passive configuration to allow quick failover to the backup node in the event of software or hardware failures on the active appliance, thus increasing reliability.

Easy to use and control, the SonicWALL E-Class SRA and SRA Series for SMBs are perfect solutions for larger enterprise organizations who need to provide their users with secure remote access, under any circumstances. Providing one of the easiest-to-use and easiest-to-control SSL VPN solutions available, these licenses can be conveniently paused or resumed.

- **Instant secure remote access when it is needed most**
- **Insuring against business disruptions or seasonal spikes**
- **Designed for reliability in emergencies**
- **Easy to use and control**

With SonicWALL Secure Remote Access working to enable business continuity, organizations can:

- Protect the servers/applications/data centers—securing the communications inside and out
- Provide easy-to-use secure access to employees and partners from anywhere
- Leverage SonicWALL Spike Licenses to provide capacity upgrades in the event of a business disruption
- Control access with granular access control rules
- Experience an easy-to-manage solution with unified policy tying business rules to access control rules for any resource and any access method

Business Continuity Deployment

Specification

Maximum Additional Users Permitted per Appliance

SonicWALL Aventail E-Class SRA EX6000	Up to 250 users
SonicWALL Aventail E-Class SRA EX7000	Up to 5,000 users
SonicWALL SRA 4200	Up to 500 users
SonicWALL SRA 1200	Up to 50 users
SonicWALL SRA Virtual Appliance	Up to 50 users

Support

The Spike License Pack for E-Class SRA includes SonicWALL Support, providing global 24x7 service and support for the duration of the spike period. Support for the SRA appliances will be provided as 8x5 or 24x7 and will be based on the current Dynamic Support contract active on that specific appliance.

Terms and Conditions

In order to use the Spike License Pack (Temporary Capacity Upgrade) on a SonicWALL Aventail E-Class SRA or SRA appliance, the appliance must have an active support contract.

Spike Licenses for E-Class SRA Series are only available in 10-day and 30-day increments. Licenses cannot be broken into smaller amounts. Once the Spike License is requested and applied, it becomes an active license until the 10-day or 30-day expiration date is met. At that point the original license shipped with the appliance can be reapplied.

Spike Licenses for the SRA Series are only for 10-day increments.

Note on E-Class SRA Spike Licenses: Spike License (Temporary Capacity Upgrade) time increments are activated from the moment you request the license from MySonicWALL (www.mysonicwall.com). If you are intending to activate successive Spike Licenses, you should not activate them at the same time. Rather, activate the subsequent Spike License just slightly before the previous one has expired.

Note on SRA Spike Licenses: Spike License (Temporary Capacity Upgrade) time decrements are activated from the moment you start the license from the SRA appliance. Whenever time decrements are made to the Spike Licensing, they happen in the granularity of one-day time periods.
