

Dell SonicWALL advantage

Organizations are constantly challenged with balancing key business priorities and risk management, made especially difficult in today's world of continuous change. Companies strive to optimize productivity and maximize ROI by taking advantage of technology trends like cloud computing, Web 2.0, virtualization and mobility. These trends extend the value of business networks, but have created new avenues for rapidly evolving and increasingly dangerous threats. While cyber criminals globally are financially and even politically motivated, organizations today must defend themselves within ever tightening budget restraints.

Historically, organizations have had to settle for static point solutions that cannot dynamically adapt to the continuously shifting threats or easily adjust to new technologies or business demands. These solutions also add complexity and expense.

Intelligent network security and data protection solutions

Dell® SonicWALL® provides intelligent network security and data protection solutions that enable customers and partners to dynamically secure, control, and scale their global networks. Using input from millions of shared touch points in the SonicWALL Global Response Intelligent Defense (GRID) Network, the SonicWALL Threat Center

provides continuous communication, feedback, and analysis on the nature and changing behavior of threats. SonicWALL Research Labs continuously processes this information, proactively delivering countermeasures and dynamic updates that defeat the latest threats. Patented* Reassembly-Free Deep Packet Inspection® technology, combined with multi-core parallel architecture, enables simultaneous multi-threat scanning and analysis at wire speed and provides the technical framework that allows the entire solution to scale for deployment in high bandwidth networks. Dell SonicWALL network security and data protection solutions, available for the SMB through the Enterprise, are deployed in large campus environments, distributed enterprise settings, government, retail point-of-sale and healthcare segments, as well as through service providers.

Dell SonicWALL offers a comprehensive lineup of industry-leading network security and data protection solutions, including firewall, secure remote access/SSL VPN, anti-spam/email security, and continuous backup and recovery, plus centralized management and reporting, and 24x7 technical support.

Originally founded in 1991, SonicWALL was acquired by Dell in 2012.

SonicWALL is an industry leader

- Protecting enterprises worldwide covering millions of business users
- Highest overall protection Next-Generation Firewall "Recommended" by NSS Labs (SuperMassive E10800 Series running SonicOS)
- Positioned in the Leaders' Quadrant of the Gartner Magic Quadrant for Unified Threat Management
- Positioned in the Visionaries' Quadrant of the Gartner Magic Quadrant for SSL VPN

Organizations that have deployed SonicWALL solutions include:

- Aaron's
- Altru Health Systems
- DavCo Restaurants
- Dolphin Fast Food
- Hall County Schools
- Weber County
- Western Dental

Award-winning leadership

Dell SonicWALL has been hailed by industry publications such as Network World, InfoWorld, PC Magazine, and SC Magazine for easy to use, high quality, and high performance appliances and services. Gartner named SonicWALL in the Visionaries Quadrant in the SSL VPN Magic Quadrant 2011, and most recently named SonicWALL in the Leaders Quadrant in their 2012 Unified Threat Management Magic Quadrant. In the NSS Labs 2012 Next-Generation Firewall Security Value Map™, the Dell SonicWALL SuperMassive E10800 running SonicOS earned recognition as the Highest Overall Protection Next-Generation Firewall Recommended by NSS Labs. This proven SonicOS architecture is at the core of every Dell SonicWALL firewall.
